

RCSI Postgraduate Module in **Musculoskeletal Injection Therapy**

This module focuses on development of knowledge, advanced reasoning and practical skills pertaining to the use of joint and soft tissue injections in the management of upper and lower limb musculoskeletal conditions.

This module is ideally suited to doctors working in orthopaedic, rheumatology, sports medicine and general practice settings, as well as allied health professionals, such as physiotherapists and nurses, working in advanced practice/musculoskeletal triage roles, alongside consultants, in public or private rheumatology or orthopaedic hospital clinics.

The module is delivered by senior faculty of the RCSI Schools of Physiotherapy, Pharmacy and Biomedical Sciences, and Medicine, as well as medical and physiotherapy clinicians who use injection therapy in their day-to-day practice.

Content will include:

- > review of relevant musculoskeletal anatomy
- > principles of injection therapy techniques
- > clinical decision-making
- > pharmacology of joint and soft tissue injection therapy
- > professional, legal and safety issues
- > appraisal of research evidence

2025 DATES

Thursday, 10th and Friday, 11th April 2025

Thursday, 1st and Friday, 2nd May 2025

(Additional pre-recorded material will also be provided online)

Details of the module and online application are available at the following website link [RCSI injection therapy module](#)
